## What is Cryptocurrency?

What are Cryptocurrencies? Cryptocurrencies are digital tokens. They are a type of digital currency that allows people to make payments directly to each other through an online system. Cryptocurrencies have no legislated or intrinsic value; they are simply worth what people are willing to pay for them in the market.

## **History and Evolution**

## **Decentralization** and Blockchain

In blockchain, decentralization refers to the transfer of control and decision-making from a centralized entity (individual, organization, or group thereof) to a distributed network. In Bitcoin's case, the blockchain is decentralized, so no single person or group has control—instead, all users collectively retain control. Decentralized blockchains are immutable, which means that the data entered is irreversible. For Bitcoin, transactions are permanently recorded and viewable to anyone.

## What is CryptoTrading?

Cryptocurrency trading means taking a financial position on the price direction of individual cryptocurrencies against the dollar (in crypto/dollar pairs) or against another crypto, via crypto to crypto pairs. How Does the Cryptocurrency Market Work? Though cryptocurrency is a currency, it's also considered a digital asset, allowing you to invest in it as you would with stocks or bonds. You can buy cryptocurrency anytime, hold it in your crypto wallet or cash it into fiat currency through an exchange.

## What is Forex Trading?

Forex trading, also known as foreign exchange or FX trading, is the conversion of one currency into another. FX is one of the most actively traded markets in the world, with individuals, companies and banks carrying out around \$6.6 trillion worth of forex transactions every single day. Forex trading is not illegal, but SEBI and RBI highly regulate it. You can only trade in four currency pairs with the INR as the base or the quote currency. You also need to use a SEBI-registered broker or an authorised dealer to trade legally in forex in India.

## What is Data Center

A data center is a physical location that stores computing machines and their related hardware equipment. It contains the computing infrastructure that IT systems require, such as servers, data storage drives, and network equipment. It is the physical facility that stores any company's digital data. A data center or data centre is a building, a dedicated space within a building, or a group of buildings used to house computer systems and associated components, such as telecommunications and storage systems.
